

# Set of 3 Hanging Solar Lights

## How the Solar Light Works

During the day, the solar panel converts solar power into the rechargeable battery. At night, the light turns on automatically by the stored energy. How long the light lasts depends on its location, weather conditions and seasonal lighting availability.

## Choosing the Right Location

An outdoor location with direct sunshine and where the solar panel of your light can receive at least 8 hours of sunshine each day is an ideal location for solar light. Shady locations will influence the batteries charge and may shorten the working time of the light at night time. The solar light should not be placed near lighting such as street lights, which may cause the light to turn off as there is a sensor inside to feel brightness and control the light working. The solar light is ideal for night time lighting of the garden, lawn, patio, walks or wherever needed. You can also charge the light/s outdoors then use as indoor illumination.

## Precautions

Take note that the light is designed to work when ambience turns to dark. If there are strong light sources nearby then the lamp might be very dim or not work at all.

Although the battery has been charged by the manufacturer, the electric levels will have dropped when you receive it.

Please charge it for a full day to

optimize performance. The surface of the solar light must be kept clean, if not, this will influence the efficiency of charging.

## How to use the Solar Light

The power switch is usually located under the solar panel. Turn the switch to "ON" for a static light.

When the environment turns to dark, the solar light will light up automatically. In daylight, the solar light will turn off automatically and store energy from the sun.

If the light does not turn on automatically at night time after 8 hours of charging during the day, please check the following things;

- 1) Make sure the power switch is in the "ON" position.
- 2) Check the battery to ensure that ends are making secure contact with the terminals.
- 3) Ensure the light is in a sunny location and not in a shady area, and that the solar panel is facing the sun.

## Replacing Batteries

If the light stops working after it has been used for a long time, the battery may be beyond its lifespan. You may open the cover of the battery compartment to change a new set of rechargeable battery.

Battery Specification: 1 x 2/3AAA 1.2V 100mAh Ni-MH battery included

## Disposal and Recycling of Batteries

To protect the environment, batteries must not be thrown in the domestic garbage, nor disposed of in a fire as they contain dangerous materials. Please dispose of the batteries by taking them to the local waste collection service for recycling.

Replacement batteries can be purchased at most electrical retailers.

**WARNING:** This is not a toy. Keep away from children and pets.
